

CoreFour

Sprint 7 Ceremony

(November 09, 2025 – November 15, 2025)

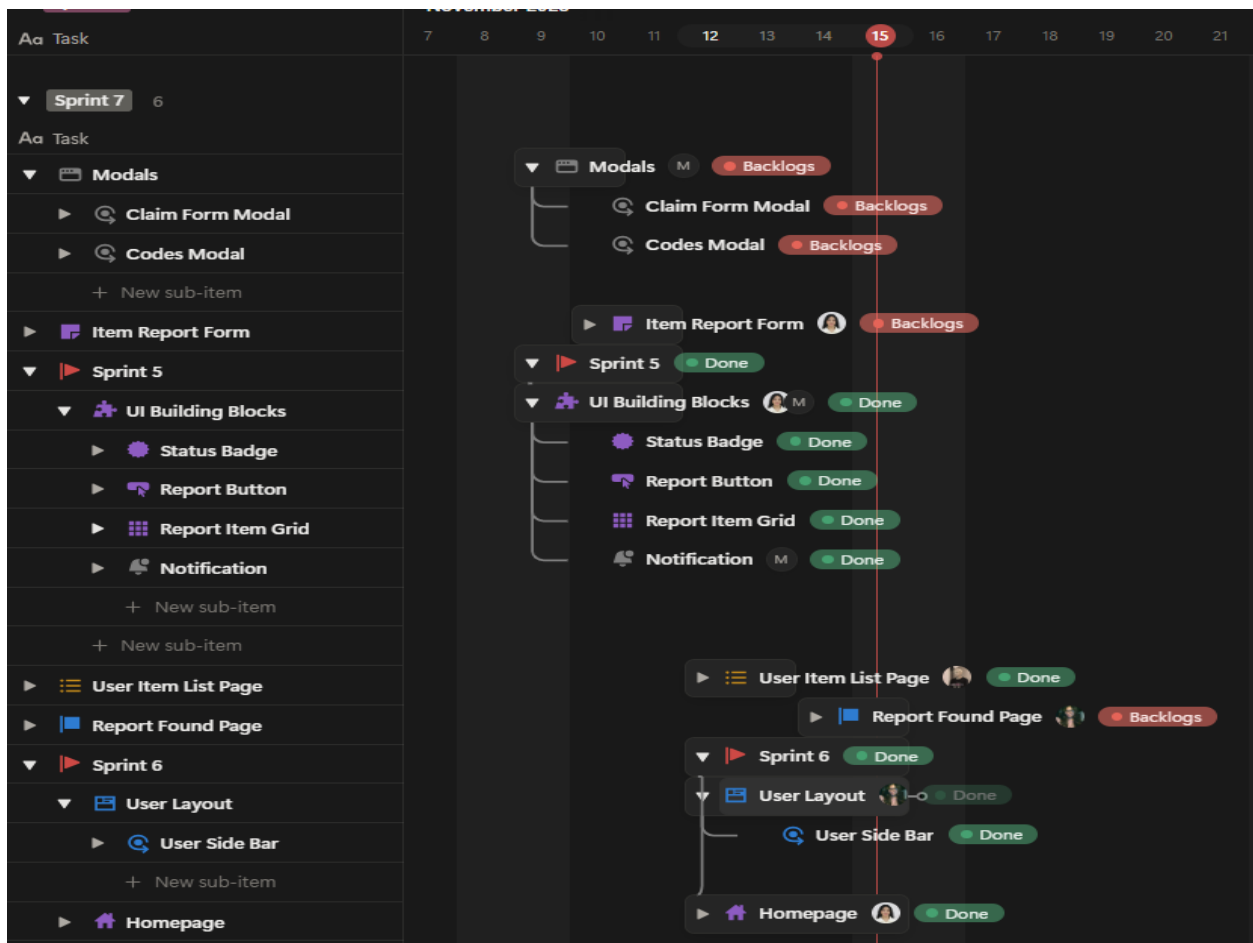

Sprint Planning / Progress Update

Sprint 7 Progress Percentage (1/4):

25%

Overall Project Percentage (20/42):

48%

The things we did in sprint 6 are: we finalized the UI and UX design plan of our system. We polished the authentication of our system, implementing token refresh and connecting the register functionality to the backend. We also implemented the paginated notification with backend connectivity, home page and the item list page (lost and found). Then, we completed the UI building blocks. In regards of backend, we added the Data Transfer Object (DTO) for user and report. We also added the pagination in notification endpoints.

We have finished the backlogs from sprint 5 and sprint 6 but we had backlogs from sprint 7, which are the modals, item report form, and report found page.

Sprint Retrospective

What went well:

- We are able to implement token refresh
- We are able to complete the sprint 5 and 6
- Finalization of UI and UX design

What could be improved:

- Some of the component's UI
- Use Server-Sent Events (SSE) instead of polling in notification
- Connect some of the pages to the backend
- Enhance the backend to sync with the data needed of the frontend

What needs to be done:

- Backlogs from sprint 7:
 - o Modals
 - o Item Report Form
 - o Report Found Page
- Proceed to Sprint 7
